

VIDEO TECHNOLOGY THAT WILL TRANSFORM YOUR BOOTH ENGAGEMENT

LEDSKIN®

The newest technology in video engagement is available for your upcoming booth: LEDSkin. This revolutionary system from Ion Exhibits, in partnership with beMatrix, brings video engagement to the next level. Your wall becomes a living part of your booth design, with high definition video bringing attendees into your booth and keeping them engaged.

VIDEO IN HIGH DEF

LEDSkin maps to a grid with 2.5 pixel display - the highest definition currently available with this technology.

MODULARITY

Because of the proprietary panels, LEDSkin can be configured in multiple ways to easily integrate in your different booth inventory.

SIMPLE TO USE

Using the latest in hardware drivers and pre-sequenced software with Auto On & Run features, NO on-site technicians are needed to power up in the morning.

COST CONSCIOUS

With the reduction in additional equipment, elimination for AV services and replacement of wall graphics, LEDSkin is a cost conscious option for your show schedule.

EASY INSTALLATION

LEDSkin tiles magnetically snap into place for perfect alignment and tool-less assembly, with wiring in the structure, so no need for AV.

DESIGN SCALABILITY

Integrate the LED panels into your exhibit design with inside and outside corners, ceilings and printed graphic panels within the LED tile arrangement for cost effectiveness.

Have a show stopping booth and the place for amazing attendee engagement with the integration of LEDSkin. Contact Ion to learn more and book an appointment in our showroom to see this technology in action.
