

Flextile NEW PRODUCT

80 | 100 | 120

A whole new kind of display is here!

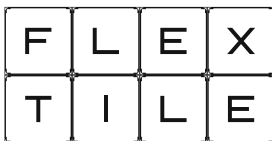

Portable, modular, unique, and patented.

Simplicity at its most beautiful and functional. Each panel can hold its own graphic or be part of a larger, seamless mural.

With three different frame sizes and the ability to navigate multiple angles, your imagination is the limit.

The frames are folded out by hand and simply stacked as needed to build the display. No tools, no locks, no hassle.

Choose from the completed solutions in the tables below or build your own display.

See more about this product on YouTube.

The frames are folded out by hand and the display is then built from the ground up, starting with the metal support feet.

The frames are square and are available in the sizes of 80 cm, 100 cm and 120 cm.

Graphic flexibility that caters to your messaging needs.

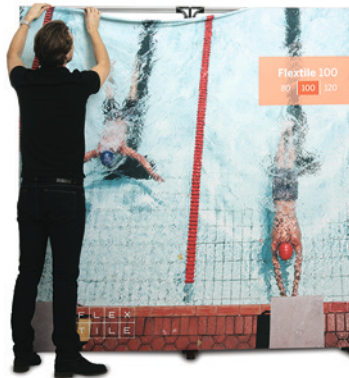

Choose between having one graphic per frame or one seamless graphic across multiple frames. Make the display double sided and have a totally different graphic configuration on the backside of the display. If a pillow case graphic is what you prefer, the Flextile can do that as well!

One graphic per frame

The easiest set up. The graphics are already installed in the frames. Assemble a small display in just a few minutes.

One graphic over four frames

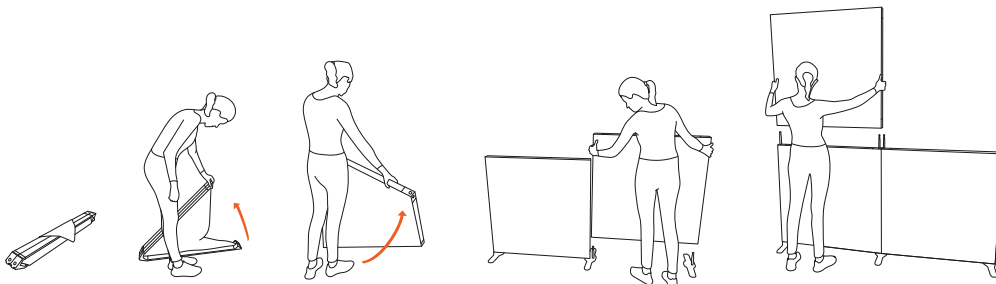

A larger graphic that spans across multiple frames, front only or double sided. The SEG graphic inserts easily into the grooves of the frames.

Double sided pillow case graphic

The pillow case graphic pulls over the Flextile display using a stretch fabric. No more rounded corners, no more pile of aluminum pipes. A pillow case display made simpler and better.

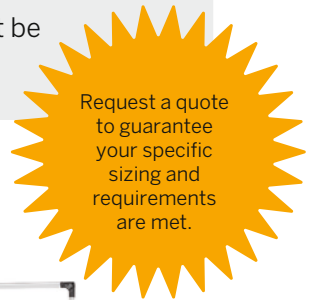

The total size of a Flextile wall depends on the frame size(s) you select (80, 100 and 120 cm) and the number of frames you choose to build your wall with.

We have provided several examples that might work for you, but we encourage you to design your own space in ways only

Flextile allows. Consider not only the shape of the display, consider also the great variety of ways the messaging can be presented using a combination of single frame and multi frame prints.

NOTE: Different size frames cannot be stacked.

What will you build with Flextile?
